Prashant Pathak

EXPERIENCE

Tata consultancy services, Gurugram, New Delhi — *Senior Full stack Developer*

May 2023 – Present

Versatile **Full Stack Developer** with deep expertise in **React.js, Node.js, Express.js, FastAPI, and GraphQL**, delivering scalable and high-performance web applications. Skilled in **end-to-end project** execution — from conceptualization to deployment — with a focus on performance optimization, user experience, and maintainability.

Experienced in **Agile methodologies**, leveraging tools like **Rally, Jenkins, and GitHub Copilot** to streamline development workflows, CI/CD pipelines, and collaborative project management.

Adept at **server-side rendering** techniques to enhance SEO and optimize application responsiveness.

Strong background in **Python for AI/ML automation, Azure AI cloud integration, and real-time dashboards**, ensuring seamless data flow and transparency across complex systems. Recognized for **technical troubleshooting, project leadership, and creative UI/UX design**, blending engineering precision with culturally resonant digital experiences.

E2E Research Services Pvt Ltd, New Delhi — *Sr. Developer*

June 2020 – May 2023

Moody's Analytics knowledge services, Gurugram — *Sr. Programmer*

October 2018 - April 2020

Toluna India Pvt Ltd, New Delhi — *Programmer* - April 2017 - October 2018

Apsidata solution Pvt Ltd, New Delhi — *Programmer* - April 2016 - March 2017

EDUCATION

Galgotia College Of Engineering and Technology, Uttar Pradesh Technical University (UPTU), Lucknow — *Bachelor of Technology*

August 2013 - June 2016

First Division with an aggregate of 64.00% marks

Board of Technical Education Uttar Pradesh, Lucknow — *Diploma*

August 2010 -June 2013

First Division with an aggregate of 74.00% marks

SKILL

FRONT END | React Native, React JS, Redux, JSON, JavaScript, HTML, CSS, jQuery

BACK END | Python, FastAPI, RESTful API, Node JS, Express JS,

DATA BASE | MongoDB, SQL, NOSQL, Oracle

AI Tool | Azure AI, GitHub copilot

SOFT SKILL | Team Management, Agile methodology, Continues learner

CERTIFICATIONS

Generative AI, from GANs to CLIP, with Python and Pytorch | Jan 2026

React Native - The Practical Guide | Sep 2025

React: Design Patterns | Feb 2025

React, NodeJS, Express & MongoDB - The Mern Full Stack Guide | Nov 2025

PROJECTS

DSNP — *Food Benefit Statistics*

Developed an AI-driven dashboard to simulate and visualize food benefit statistics. Implemented **AI-based simulated datasets** to analyze benefit distribution patterns and trends. Designed interactive UI components for statistical insights using **React Simple Maps** for geographic visualization and **MUI** for consistent design.

Integrated **Next-Auth** for secure single sign-on (SSO), ensuring seamless user authentication. Built real-time simulation models to provide dynamic updates, allowing users to explore multiple scenarios and outcomes. Enhanced transparency with drill-down views into benefit categories, demographics, and usage metrics. Delivered a scalable solution capable of handling large datasets while maintaining performance and accuracy.

Languages/Technologies/Platforms worked on: React JS, JavaScript, HTML, CSS, Node.js, Python (AI/ML simulation), React Simple Maps, MUI, Next-Auth, GitHub, Postman, Azure, Oracle, Spring.

United Healthcare -App — *Healthcare Claim processing*

The United Healthcare app is designed to provide users with comprehensive health services and information. The app's user interface (UI) has been developed using React Native and Redux for state management, ensuring a seamless and responsive user experience across different devices. It includes features such as User Authentication, Health Records, Claim Processing, Spending and Summary, and Health Tips.

I was instrumental in developing many of the UI pages, contributing significantly to the app's overall design and functionality.

Languages/Technologies/Platforms worked on: React Native, React JS, JavaScript, HTML, CSS, Datadog, Splunk, Android Studio, Xcode, Postman, GitHub, Rally, Service Now.

Realtime dashboard — *User Data Management*

Developed a real time dashboard to manage user data with milestone-driven architecture. Each milestone supported multiple dependencies, enabling creation, editing, and deletion at all stages. Implemented full CRUD functionality with instant synchronization to ensure data consistency across the dashboard.

Designed intuitive UI components for milestone and dependency tracking, providing transparency and efficiency in multi-stage workflows. Built scalable backend integration to support multiple users and large datasets, ensuring smooth performance. Enhanced user experience with real time updates and stage control, allowing management from development through testing, publishing, and promotion.

Languages/Technologies/Platforms worked on: React JS, JavaScript, HTML, CSS, Spring, Jenkins, Postman, GitHub, Rally, Python.

Nemis outbound config — *Insurance Claim processing*

Developed Front End with React JS to show the insurance claim processing details, Drool writing, editing, property handling for Drools, running test cases for Drools. Nemis includes component from MUI and UITK additional package.

Developed Activity log, to monitor the user activity on panel and keep record for the same, provide access to the user. keeping user activity in temporary space until activity is not final. Each activity will go through different phase, from Development, testing, publish, then promote. It is a version controlling for each activity.

Languages/Technologies/Platforms worked on: React JS, JavaScript, HTML, CSS, Oracle, Spring, Jenkins, Postman, GitHub, Rally.

Smart Healthcare Adviser — *Provide AI Based advice for health insurance plan*

Built a system to recommend health insurance plans using **predictive insights from Google Gemini API**. Developed backend with **Apollo GraphQL** for data filtering across user profiles, plans, and claims. Designed frontend with **React.js + Apollo Client**, delivering a streamlined one-page user experience.

GAGA report generator — *Report generation for large Data Base*

Developed frontend charts and filters to generate reports from large, multi-country employment datasets. Implemented versioning and country-specific filters for dynamic data visualization and analysis
